

This patient has mitochondrial disease and requires special emergency protocols. For important information, visit www.umdf.org/mito101revised and see “*Emergency Department Letter and Metabolic Precautions*” by Sumit Parikh, MD, Cleveland Clinic. Or, scan the code to the right to see the information on your smart device.

Patient Name: _____

Patient's Mitochondrial Disease Specialist:

Phone: _____

Other Information: _____

visit www.umdf.org.

Mitochondrial disease can cause seizures, muscle weakness, cardiac problems, GI issues, blindness, deafness, and a potentially shortened life. Any organ of the body may be affected because the mitochondria, which are responsible for energy production in almost every cell, are not functioning properly. For more information about mitochondrial disease, its diagnosis, and symptoms,
